Compatibility

case+drive was designed to be used as part of the Logitech mobile system. However, the +drive mount is compatible with any smartphone when used with the included metallic universal phone adaptor.

- Before installing on your dashboard or windshield, please move the +drive mount around to determine the best location for viewing without obstructing your view of the road.
- Clean the chosen area with a soft and slightly damp cloth.
- Press down on the +drive mount as you twist the locking mechanism.
- Place your case+ equipped smartphone on the +drive mount.

- case+drive makes using your smartphone in the car the natural experience it should be. No more clips, no more hassles. Just install the sleek mount and use the free-mount system to secure your phone.
- Check visibility to make sure it is in the proper position and not disrupting your vision of the road.

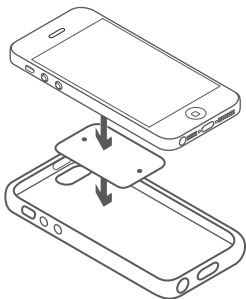

Optional accessories:

+drive Dashboard Mounting Adaptor

- If you plan to use the suction mount on your dashboard, we've included a circular adaptor plate with adhesive for your use. Utilizing the adaptor plate will create a flat glass-like surface that you can use anywhere on your dash or console.
- Clean the chosen area with a soft and slightly damp cloth before you apply the +drive adaptor on your car dashboard.
- Press down on the +drive adaptor for 30 seconds to one minute.
- Please do not use for 12 hours to assure that you have a secure fit.

+drive Universal Phone Adaptor

- Do you have multiple people using your car or maybe have both a work and a personal smartphone. Don't worry, we've got your second phone covered. We've included a metallic universal adaptor that can be adhered on the inside of most thin cases or placed on the outside of your larger case.

FAQ:

- **Will the magnets in the +drive car mount affect my smartphone?**

Nope! Your data is safe!

The iPhones uses flash memory that isn't affected by magnetic fields. The same can't be said for 1990's floppy disks, though.

- **Will +drive magnetic mount's metal frame cause antenna interference or degrade my signal?**

In our testing, we found no degradation of the signal strength (using the iOS signal test utility) with a smartphone on or off the mount.

- **What is your warranty policy?**

Please reference the included Important Information Document for the warranty of your country.

- **My phone fell while I was using the case+ drive mounting function, Will you replace my phone?**

We stand by our products.

That's why we offer a warranty that covers material and workmanship. However, we are not responsible for dropped/broken phones.

Tips & Care:

- case+drive mounts best on flat surfaces. Please avoid mounting on ceilings or uneven/rough surfaces.
- We recommend turning off the vibrate function when using the case+drive. (To prevent sliding)
- Magnets can present a choking hazard and be extremely dangerous if ingested.
- Please use care & common sense when using this product. We accept no responsibility for dropped/broken phones.
