RESTRICTION OF HAZARDOUS SUBSTANCES (RoHS) DECLARATION

The European Restriction of Hazardous Substances Directive (the “RoHS Directive”) was first introduced in 2002, to minimise the environmental impact of hazardous substances. This directive restricted the use of certain hazardous substances in electrical and electronic equipment. The recast of this directive came into force in January 2013, and introduced additional requirements for Declarations of Conformity and product CE Markings. Similar legislation is evolving in many countries across the world including China and Taiwan.

This declaration shares our approach to managing hazardous substances in compliance with all relevant RoHS legal requirements and industry good practice. This declaration is communicated via our website as evidence of our commitment to RoHS compliance and is embedded in relation supplier agreements.

Logitech complies with all relevant laws and regulations, including RoHS requirements in Europe, China and Taiwan. Our surveillance function monitors development of RoHS legislation across the globe and helps ensure we are aware of evolving and emerging requirements, and plan for continued compliance.

Logitech products comply with RoHS requirements in each relevant jurisdiction where they are sold. Our global Sustainability Function includes a legal surveillance function, which tracks developing legislative frameworks worldwide and ensures our policies, procedures and practices are regularly monitored and updated to respond to new requirements, as they emerge. All Logitech products on the market in Europe after 01 January 2013 are compliant with RoHS2, including the specific hazardous substances restrictions.

We have an established and systematic testing programme, which includes tests of an appropriate sample size of Logitech products and components on a defined basis. The scope of the testing programme includes samples of products produced at our own manufacturing facility, and supplier facilities in addition to manufacturing consumables. Products and components are mechanically disjointed to the homogeneous level and tested in accordance with good laboratory practice methods including X-ray Fluorescent (XRF) and Wet Chemical Analysis where appropriate. Our approach allows us to demonstrate single component traceability to RoHS compliance and to issue Declarations of Conformity including test reports at the homogeneous level.

We would be happy to provide further information or clarification regarding any aspect of this policy. Any queries can be directed to sustainability@logitech.com.
