1) Insert the Software Install CD and follow the instructions during the install.
   - The installer will check for the latest version of the software.
   - Alternatively, you can download the latest version of the software at www.logitech.com/downloads.

2) You may be asked to reboot the PC.

3) Logitech Alert Commander will open.

4) The First Run Wizard will guide you through the final steps of setup.

**Power Supply Install Note**

- The power supply unit is weatherproof and can be installed outdoors. Use these tips to ensure reliable power supply usage.
  - Make sure the outdoor outlet is weatherproof.
  - Do NOT plug the power supply into the wall so that it lays horizontally or flat.
  - Avoid direct sunlight.

**Network Adapter / Power Supply Install Note**

- Do NOT plug the network adapter or power supply into a surge protector or power strip as they interfere with the cameras.
- Surge protectors are built-in to the network adapter and power supply and protect the cameras.
- The network adapter and power supply must be plugged directly into your wall outlet.

**Quick-start guide**

1) Install Software
   - Internet access is required for installation.

2) Plug in Network Adapter
   - The network adapter is not designed for outdoor use and must be installed indoors.
   - When prompted to plug in the network adapter, plug one end of the blue cable connector into the network adapter.
   - Then, plug the network adapter into a power outlet.

3) Plug in Your Camera
   - When prompted to connect your camera:
     1. Unscrew the hatch from the back of the camera and lift.
     2. Plug the yellow cable connector into the port.
     3. Screw the hatch firmly in place.

4) Wall/Ceiling Mounting Instructions
   - The wall mount allows you to easily fasten your camera to a wall, post, overhang, or other surface.
   - Start by pre-drilling holes into the base surface and then fastening the mounting base with the included screws.
   - Mount the power supply unit to the wall.
   - Plug the power connector into the plug slider and plug the power supply into an outlet.

Legal Warning:
Certain uses of security camera products and audio devices, such as employee monitoring, surreptitious viewing and recording of images/voice audio, or the use, publication or distribution of image/audio recordings, are prohibited or restricted by country, state and local laws. Be sure to comply with the laws in your country, state, and locality when using Logitech Alert products and services.
Congratulations! You have completed the basic setup. Refer to the Getting to Know guide to read about additional features and functions.

FAQs
Where can I find more information?
Commander Help
You can press the F1 key from any screen in the Alert Commander to access the online Help system.

Knowledge Base
Troubleshooting help is available at www.logitech.com/support
Customer Support
Call 1.888.469.4543
Refer to System Requirements Guide.

Troubleshooting camera connection:
What if camera/video disappears?
1) Test another outlet for your camera, perhaps one closer to your PC.
2) Verify that the camera power supply and the network bridge are plugged directly into a power outlet and not a power strip.
3) Check device settings or press the F1 key in Commander Software for additional help.
4) Go to Settings > Cameras > Add/Find > Add Cameras.
5) Reset the camera. See instructions in “Camera Reset Instructions.”

What do I do if I need a longer power supply cable?
Logitech CAT-5e cables have been specially designed to create a weatherproof seal when attached to the camera and power supply. We do not recommend using after-market cables. Longer cables are available for purchase at www.logitech.com/dvs/ (Accessories).

Want to see more FAQs?
Go to www.logitech.com/security/support

Camera Reset Instructions
Insert a paper clip into the reset hole located on the back of the camera and press gently and then release.

If the camera does not appear after reset, go to Settings > Cameras > Add/Find > Add Cameras. If the camera still does not operate, contact technical support.

Resetting the camera will not delete video recorded on the microSD card.

Reading the Diagnostic LEDs
Motion LED
How do I know the camera is recording?
Camera is ready to record (Red)
Camera is recording (Red, blinking)

Turning Off Motion and Diagnostic LEDs
You can turn off the motion and diagnostic LEDs in the Settings > Camera dialog. See F1 Help for instructions.

Which LED colors indicate “camera is working”?
Connected to Internet (Green)
Connected to Alert Commander (Purple)
Upgrading Firmware (White)
Camera in Standalone mode (Yellow)
Not connected to Alert Commander or Internet (Light Blue)

Reading the Diagnostic LEDs
Camera Diagnostic LED
Which LED colors indicate “camera is not working”?
Camera boot-up failed * (Red, blinking)
microSD card read/write failure - no microSD card * (Alternating Red / Yellow, blinking)

Power Supply/Network Adapter Diagnostic LED
What do these LEDs tell me?
Traffic and data is flowing (Green)
Connection with Ethernet/LAN (Yellow)

Network Adapter/Power Supply Status LEDs
What do these LEDs tell me?
Link to Power Supply (Green)
Shows network traffic (Blue)

Using the microSD™ card adapter
NOTE: Unplug the camera before removing, replacing, or upgrading your microSD card. microSD card comes pre-installed.
To review the video on the microSD card, we recommend you using Logitech Alert Commander.
To review the video on the microSD card without Logitech Alert Commander:
1) Open the hatch on the bottom of the camera and remove the microSD card from its port.
2) Plug the microSD card into the adapter.
3) Plug the adapter into the PC’s SD card slot.

• View video recordings using the free Apple QuickTime player or other player that supports H.264 video playback. (To download QuickTime, visit http://www.apple.com/quicktime/download/)

microSD card must be installed in the camera for recording to occur.

* See Camera Reset Instructions for assistance.
