Use your product

Power on and volume

Rotate the volume knob on subwoofer until you hear a "click". The green power LED will be lit.

Further rotate the volume knob right or left to adjust the volume to your desired level.

Bass level

Rotate bass control right to increase bass output or left to lower it.

Troubleshooting

One or three speakers produce little or no sound?

- Check power connection to the subwoofer. Try a different AC outlet. Rotate the speaker volume knob to the 12 o'clock position.

- Check the speaker cable connection with your computer the speaker cable must be plugged into the line-level, speaker, or headphone output jack.

- Check volume and balance controls in your media application and computer's operating system.

- Quit your media application, and then restart it.

- Connect the speakers to another audio source (e.g., MP3 player). If they work, your computer's soundcard may be the cause of the problem.

Checking operating system volume/balance controls

- Windows® Vista and Windows® 7: Go Start/Control Panel/Sounds/Playback Devices tab. Select your soundcard as the sound playback device. Verify that the Speaker Icon is not muted.

- Windows® 8: From Start Menu, select Desktop tile. From Charms menu, select Settings/Control Panel/Hardware and Sound/Sound/Playback devices tab. Select your soundcard as the sound playback device. Verify that the Speaker Icon is not muted.

- Mac OS X: Open System Preferences and select Sound/Output tab. Select your soundcard as the sound output device and adjust the Output Volume slider. Verify that the Mute box is not checked.
