

ZEROTOUCH

User Guide

TO GET STARTED

1

Download the app on Google Play Store

Works with Android™ 5.0 or later

[Download here](#)

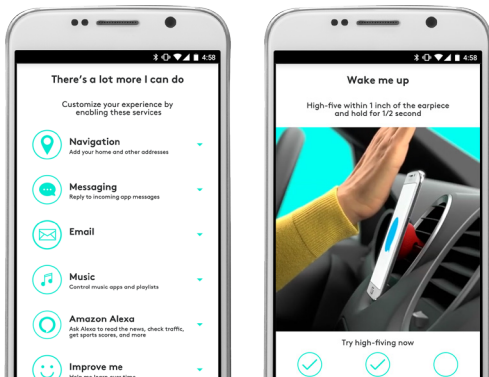

2

Launch the ZeroTouch App for step-by-step instructions

You'll learn to:

- Pick a metal adapter
- Place the mount in your car
- Pair your phone to the mount
- Wake-up the app
- Customize app preferences and features

3

Use ZeroTouch with some of our favorite commands

"Alexa, tell me a joke"

"Text John"

"Navigate home"

"Play jazz"

"Call Mom"

"Email Lisa"

CHOOSING A METAL ADAPTER

- We recommend using the pill-shaped adapter on the outside of your phone or case:
1. Read below to figure out the best placement for the adapter.
 2. To attach, clean the back of your phone or case where you plan on sticking the adapter.
 3. In a room temperature environment, place and hold the adapter down for 60 seconds to adhere.

A

If you use wireless charging...

Place the metal adapter outside of the charging area.

B

If your phone has a magnetic sensor...

Using your mount, find a place on the back of your phone where the mount's magnet does not put your phone to sleep.

C

If A or B does not apply...

Place the adapter vertically in the middle of your phone.

If you use a case less than 2mm thick, you can also use the round adapter in between the phone and case, like the illustration on the left.

Note: If you have a case with a textured back (fabric, rhinestones, etc.), it may not work with either adapter. Try using a smooth, thinner case or use the pill-shaped adapter on your phone and dock without the case on.
