Wired 3.5mm Headset with Microphone

“When you need to provide headsets for 700 kids, cost matters a ton and they have to be durable and dependable. Comfort is essential for elementary kids, plus they have to look cool or they’ll bring in their own thing.”

TYLER GRAFF
Principal

OVERVIEW

Claire Lilienthal is a K-8 alternative school in the San Francisco Unified School District that uses headsets in the classroom to individualize education and enable adaptive learning.

CHALLENGE

In the classroom, headsets enable individual students or small groups to experience independent learning with audio feedback without sound from a laptop broadcasting to the broader classroom. Durability, quality, comfort, and affordability are key. Plus, kids care about both comfort and style and simply won’t wear a headset that falls short on either count, which can interfere with learning.

SOLUTION

The Logitech Wired USB and 3.5 mm Headset delivers high-quality stereo sound. The sturdy headband is lightweight with a broad range of adjustment and ultra-soft leatherette ear cushions provide hours of comfort.

Both the Wired USB and Wired 3.5mm Headset supports a blended learning environment and enables opportunities to individualize education. With adaptive learning software programs, for example, one kid can be sitting next to another and each are getting exactly what they need in math or language arts.

RESULT

With quality, durability, and affordability, both the Logitech Wired USB and Wired 3.5 mm Headsets are a great fit for teachers and students alike. They fit easy, they’re adjustable, and kids like the long-wearing comfort.

The headsets have become an important part of the teaching environment at Claire Lilienthal. Korean Immersion students can have conversations with kids in Korea, children with learning disabilities can engage with custom content, and the headsets even help kids focus when taking tests or doing individual assignments by reducing ambient noise.
