

## LOGITECH VIDEO CONFERENCING SOLUTIONS HELP UNIVERSITY OF OTAGO ACHIEVE VIDEO COLLABORATION WITH OUTSTANDING RESULTS

The University of Otago, New Zealand’s oldest university, is leveraging Logitech video conferencing solutions to expand staff and student collaboration, including informal sync-ups, intercampus and external meetings, distance teaching, PhD oral exams, interviews, and seminars based on outstanding quality, reliability, and ease of use.

### INDUSTRY

Education

### LOCATION

New Zealand

### WEBSITE

otago.ac.nz/

### PRODUCTS USED

Logitech MeetUp

Logitech GROUP

Logitech GROUP with expansion mics

### CHALLENGE

The University set out to find a video conferencing solution for staff and students that’s reliable, user-friendly, and affordable. When evaluating various options, some fell short based on complex setup and/or poor audio performance to the point of being unusable, especially with larger groups.

### SOLUTION

The University chose Meetup for huddle rooms, Logitech Group for slightly larger spaces, and Group with expansion mics for their boardrooms. Key selection criteria included audio quality, plug-and-play simplicity, Mac/PC compatibility, price, and flexibility to scale the solution to the situation.

### RESULT

Logitech solutions are being used for all types of video collaboration, including informal sync-ups, intercampus and external meetings, distance teaching, PhD oral exams, interviews, and seminars— all with outstanding results. Users especially appreciate the ease of use and high performance quality.

**“We looked at many options from lower-end to higher-end alternatives. The reason we chose Logitech equipment was due to our confidence in their quality and reliability plus the performance, ease of use and price competitiveness of their solutions.”**
