

## **Logitech® Cordless Presenter**

**Cordless • Optical • PC • USB**

Hold an audience in the palm of your hand with our Bluetooth-powered cordless controller. Control your presentations from anywhere in the room—no line of sight required! And it also works as an optical mouse with a built-in laser pointer.

When giving presentations, now you can focus on connecting with your audience, not with your computer. The Logitech® Cordless Presenter™ gives you remote control of your onscreen presentation from just about anywhere in the room. You won't have to stand next to your computer or give hand signals to a partner when you need to change slides. And it doubles as a laser pointer and a two-button optical mouse, making it the only device you need to take on the road.

- Bluetooth wireless technology for reliable range of 30-plus feet (10 meters)
- Built-in laser pointer
